EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Replace the abstract on page 10 with the following new abstract as the old one was too long (more than 150 words), --A flow-rate adjustment valve for fluids, servoactuated by an electric motor, having a valve body constituted by a tubular cup, which accommodates a guiding element for a flow control element and engages first intake and discharge tubes formed at the ports. The flow control element is a stem with a threaded shank and an opposite flow control end. The stem has an alignment and rotation-preventing block which is provided with edges that slide in complementarily shaped grooves provided on a guiding element. The rotor component of the electric motor has a female thread for coupling to the threaded shank and on which a cylindrical element made of plastoferrite and is provided with an annular groove for the guiding and abutment of a spring for the bearing. The enclosure capsule is formed by a tubular portion that is closed in an upper region by a cap portion.--

REASONS FOR ALLOWANCE

2. Claims 1-10 are allowed.
3. The following is an examiner's statement of reasons for allowance: The primary reason for the allowance of the claims is a flow rate adjustment valve having the combination of being

servoactuated by an electric motor, means for reducing rotational friction in which 112 6th has been invoked with the limiting language on page 6, lines 11-12, a tubular cup accommodating a guiding element for the flow control element having a stem with an alignment and rotation preventing block with edges that slide in complementarily shaped grooves on the guide element, the rotor component coupled with a screw and nut coupling and a female thread coupling to a threaded shank on which a cylindrical element made of plastoferrite has an annular groove, and a cap-like portion closes the enclosure capsule's upper region.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Komiya, Hoehn, Dorste, Ichikawa, Fujita, and Ogawa disclose flow rate adjustment valves controlled by an electric motor.
